Education:

Southern Methodist University
Full Stack (Bootcamp) React, NodeJS, Express & MongoDB
2020 – 2021

Colorado Technical University
Software Engineering
Working Towards

Projects:

GoMessage File Project, An SSIS package that connects to the NetSuite database using an SQL query (SQL-92), to extract and transforms in a specific format! Overseas Suppliers Purchase Orders" information to exchange with external trading partners. The package, Uploads to an SFTP a CSV file; finally archiving a copy of the data for audit purposes.

Data Extraction, Within NetSuite, I created Saved Search- es to provide GL's level Transactions details for audit purposes.

EDI 810, EDI 810 was created using C#, which is a console program that connects to the NetSuite ERP database, to extract all the invoices created on the date, daily. The Program queries the data and generates the EDI 810, (X12) document. The document later is sent via SFTP to several trading partners.

EDI 850 Import, Using NetSuite Suite Script, (JavaScript- based API) and functions within the API. I created a process to import EDI, (Sales Orders) from a CSV file.
